

Jiayongshuo

173-6229-2247 | eiddiedev@qq.com | github.com/eiddiedev | eiddie.me

Portfolio: eiddie.me (project collection / live demos / demo videos)

Target: Design Engineer Intern / Experience Design Frontend Intern / UX-Oriented Internship (Available for Summer Internship)

Experience-focused frontend builder with strong visual taste and hands-on practice turning content ideas into polished, interactive, and shipped digital experiences through design and code.

Education

Hunan University of Technology | B.Eng. in Artificial Intelligence

Sep 2024 - Jun 2028

Relevant Coursework: Machine Learning, Deep Learning, Computer Vision, Data Structures and Algorithms, Database Systems

Projects

YeVerse - Immersive Music Culture Digital Experience

ye.eiddie.me

Independent Project | React / TypeScript / Three.js / Vite / Spotify Embed

- Built an immersive digital experience around music and cultural content, independently owning the visual system, modular structure, interaction rhythm, and frontend implementation.
- Designed an interactive timeline, a 3D album shelf, and cinematic transitions to turn content browsing into a more atmospheric and story-driven experience.
- Shipped it as a live experience and received strong positive feedback from music fans on social platforms.

Fut.Map - Global Football Data Map Visualization

fm.eiddie.top

Independent Project | Next.js / Three.js / Mapbox GL / Framer Motion

- Designed and implemented the visual system, interaction logic, and frontend experience for a football data product aimed at improving immersion and memorability.
- Built a connected 3D globe and 2D world map experience with Three.js and Mapbox GL, using motion design to strengthen hierarchy and first-screen impact.

EDReading - AI-Powered English Reading Tool

eiddie.top

Independent Project | Next.js / TypeScript / Supabase / AI API

- Designed a clear reading workflow for long-form English content and independently built the core interface, features, and release iterations.
- Integrated AI-based close reading analysis, dictionary enhancement, and review generation to improve usability in long-text learning scenarios.
- Reached nearly 200 registered users, supported PWA installation and cloud sync, and completed the first paid conversion validation.

BugPet - Native macOS Desktop Pet for Focus Growth

bp.eiddie.top

Independent Project | Swift / AppKit / SpriteKit

- Designed a lightweight companion experience for desktop focus scenarios, using gamified feedback to strengthen emotional value and long-term motivation.
- Built character animation, state feedback, and growth mapping with SpriteKit and native desktop capabilities to make productivity data more visible and engaging.

Skills

Frontend Development: React / Next.js / TypeScript / Three.js / Mapbox GL / Framer Motion / PWA / Responsive UI

Visual and Interaction Design: UI Design / Interaction Design / Motion Rhythm / Narrative Layout / Poster Design / Video Editing / Photography

Application Engineering: Node.js / Supabase / PostgreSQL / REST API Integration / Data Storage / Vercel Deployment

AI and Product: LLM API Integration / AI Feature Design / Content Structuring / Requirement Breakdown / Prototype Validation

Additional Experience

Trae on Campus Ambassador (ByteDance)

1st Place, TRAEFriends Wuhan Hackathon

2nd Prize, Douyin AI Hackathon (Changsha)

1st Prize, Douyin AI Hackathon (Zhuzhou)

Challenge Cup Provincial Round Finalist (In Progress)

10+ GitHub Projects Built Independently / Collaboratively

Meituan AI Hackathon National Top 30
